

ONKYO. SERVICE MANUAL

COMPACT DISC PLAYER MODEL DX-6550

Black and silver models

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SPECIFICATIONS

Signal readout system:	Optical non-contact
Reading rotation:	About 500~200 r.p.m. (constant linear velocity)
Linear velocity:	1.2~1.4m/s
Error correction system:	Cross interleave readsolomon code
Decoded bits:	18 bits linear
Sampling frequency:	176.4kHz (four-times oversampling)
Number of channels:	2 (stereo)
Frequency response:	5Hz~20kHz
Total harmonic distortion:	0.003% (at 1kHz)
Dynamic range:	96dB
Signal to noise ratio:	96dB
Channel separation:	96dB (at 1kHz)
Wow and Flutter:	Below threshold of measurability
Power consumption:	15 watts
Output level:	2 volts r.m.s.
Dimensions (W×H×D):	435×131×365 mm 17-1/8"×5-1/8"×14-7/16"
Weight:	8 kg, 17.6 lbs.

Specifications are subject to change without notice.

SERVICE PROCEDURES

1. How to Release the Transport Lock

To protect the optical assembly including the laser pickup from vibration related damage during shipping, this unit is equipped with a transport lock lever located on the base.

- Use a screwdriver to turn the lock lever (about 90°) in the round hole in the direction of arrow ().
- Before transporting the unit again, stand it with its left side facing down, and turn on the power. Wait 2-3 seconds and then turn the lock lever in the opposite direction of the arrow.

Fig. 1

2. Safety-check out

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Connect the insulating-resistance tester between the plug of power supply cable and chassis.

Specifications: more than 10Mohm at 500V.

3. Procedures for replacement of flat packaged ICs

1. Tools to be used:

(1) **Soldering iron** Grounded soldering iron or soldering iron with leak resistance of 10 Mohms or more.

Form of soldering iron's tip:

Fig. 2

(2) **Magnifying glass** for checking of finished works
 (3) **Tweezers** for handling of IC and forming of leads
 (4) **Grounding ring** Countermeasure for electrostatic breakdown
 (5) **Nipper** for removing defective IC
 (6) **Small brush** for application of flux

2. Work Procedures:

(1) Remove the defective IC

Cut all leads of the defective IC one by one using a nipper and remove the IC.

(2) Clean the pattern surface of the PC board.

Get rid of the remaining leads and solder.

(3) Check and from the leads of the new flat packaged IC to be installed.

From every lead on the new IC using a pair of tweezers, so that all of them are aligned neatly without being risen, twisted or inclined toward one side. Especially the rising portion of every lead must be formed with greatest care.

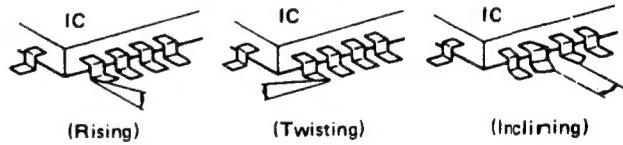

Fig. 3

(4) Apply flux to the PC board.

Apply flux to the pattern surface of the PC board which has been cleaned, as shown in the illustration. The area to be applied with flux is the portion of about 2.5mm in width where the IC's leads are to be soldered.

Be careful to apply minimum amount of flux required so as not to smear it on unwanted areas.

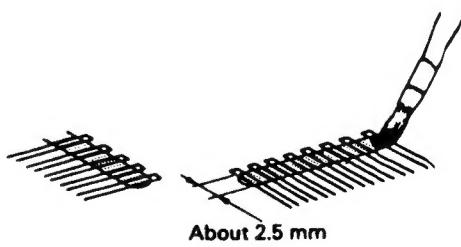

Fig. 4

(5) Temporarily tighten the IC

Carefully align the pattern and IC's leads, so that the IC will be temporarily tightened to the pattern on the four leads at the corners. At this time, soldering is required, but no need to apply soldering material.

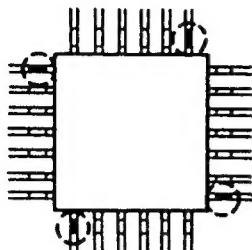

Fig. 5

(6) Apply flux to IC's leads

Apply flux to the areas of IC's leads where soldering is to be performed. Be careful not to smear flux on the root portion of any lead or the body of IC.

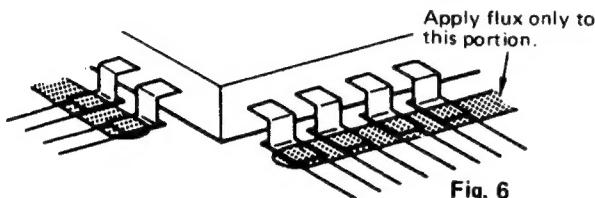

Fig. 6

(7) Soldering

While attaching the tip of the soldering iron to the soldering point as shown in the illustration, feed 2-5mm of soldering wire. Then, slowly move the iron in the direction indicated by the arrow in the illustration, so that the leads will be soldered to the pattern. Move the iron in the rate of approximately 1cm in 5sec. Proceed with your work while confirming a clean fillet of solder is formed on each lead, subsequent to the melting of flux.

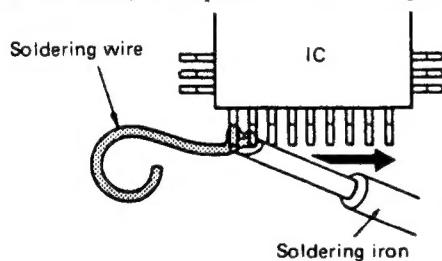

Fig. 7

CAUTION

- 1) If you move the iron too quickly, loose soldering is likely to result.
- 2) Be especially careful when soldering the first lead where loose soldering is most liable to be formed.

(8) Check the results

When soldering of all leads is finished, check the soldered portion on every lead with a magnifying glass. A tester must not be used or checking of any soldered position

NOTE ON COMPACT DISC

• Holding Compact Discs

Hold Compact Discs by the edges so that you do not touch

the surface of disc. Remember that the side of the disc with the "rainbow" reflection is the side containing the audio information.

Do not attach tape or paper to the label side of the disc and always be careful not to leave fingerprints on the side that is played.

• Storing Compact Discs

Store Compact Discs in a location protected from direct sunlight, high heat and humidity and extremely high and low temperatures. Discs should never be left in the trunk or interior of an automobile in the sun since the temperature can become very high in such a closed environment.

Always store Compact Discs in the holders in which they were sold. Never leave a disc in the player's disc holder for a long period of time.

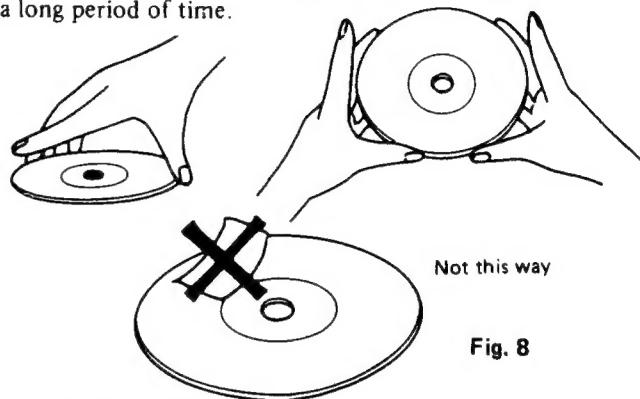

Fig. 8

• Cleaning Compact Discs

Before playing a disc wipe off the playing surface with a soft cloth to remove dust and other soil. Wipe the surface in straight lines from the center of the disc outward, not in a circular motion as you would with a phonograph record.

Do not use benzene, chemical cleansers or phonograph record cleaning solutions to clean Compact Discs. Also avoid static electricity prevention solutions since they can damage the surface of Compact Discs.

Fig. 9

Problems Caused by Dew

Dew can form inside a Compact player when it is brought from a cold environment into a warm room, when a room is rapidly heated and if a player is left in a humid environment.

This dew can prevent the laser pickup from reading the data contained in the pits in the disc surface. If the player does not operate properly because of dew, remove the disc and leave the player's power switch on for about one hour to remove all moisture.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

WARNING!!

WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION, BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.

Laser Diode Properties

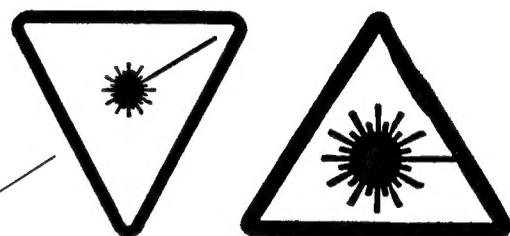

- Material: GaAs/GaAlAs
- Wavelength: 780nm
- Emission Duration: continuous
- Laser output: max. 0.5mW*

*This output is the value measured at a distance about 1.8mm from the objective lens surface on the Optical Pick-up Block.

LASER WARNING LABEL

The label shown below are affixed.

1. Warning label

DANGER —INVISIBLE LASER RADIATION WHEN OPEN AND INTERLOCK FAILED OR DEFEATED. AVOID DIRECT EXPOSURE TO BEAM.

CAUTION —HAZARDOUS LASER AND ELECTROMAGNETIC RADIATION WHEN OPEN AND INTERLOCK DEFEATED.

ATTENTION —RAYONNEMENT LASER ET ELECTROMAGNETIQUE DANGEREUX SI OUVERT AVEC L'ECLENCHEMENT DE SECURITE ANNULE. SN 29360911

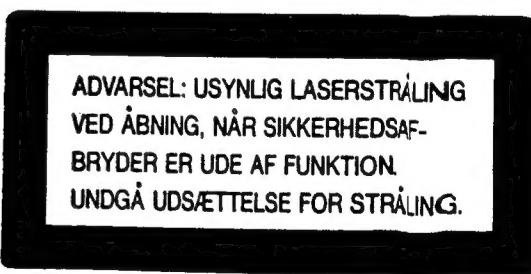

Photo 1

2. Class 1 label

This label is located on the back panel.

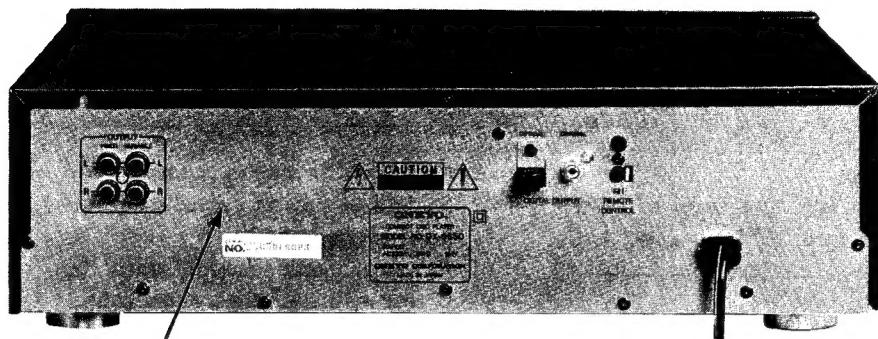

Photo 2

"CLASS 1 LASER
PRODUCT"

ADVARSEL

Denne mærkning er anbragt på apparatets højre side og indikerer, at apparatet arbejder med laserstråler af klasse 1, hvilket betyder, at der anvendes laserstråler af svageste klasse, og at man ikke på apparatets yderside kan blive utsat for utiladelig kraftig stråling.

APPARATET BØR KUN ÅBNES AF FAGFOLK MED SÆRLIGT
KENDSKAB TIL APPARATER MED LASERSTRÅLER!

Indvendigt i apparatet er anbragt den her gengivne advarselsmærkning, som advarer imod at foretage sådanne indgreb i apparatet, at man kan komme til at utsætte sig for laserstråling.

ADVARSEL: USYNLIG LASERSTRÅLING
VED ABNING, NÅR SIKKERHEDSAF-
BRYDER ER UDE AF FUNKTION.
UNDGÅ UDSÆTTELSE FOR STRÅLING

VAROITUS! Laite sisältää laserdiordin, joka lähettää (näkymä-
töntä) silmille vaarallista lasersäteilyä.

Fig. 10

CAUTION ON REPLACEMENT OF PICKUP

The laser diode in the optical pick-up block is so sensitive to static electricity, surge current and etc. that the components are liable to be broken down or its reliability remarkably deteriorated.

During repair, carefully take the following precautions. (The following precautions are included in the service parts).

PRECAUTIONS

1. Ground for the work-desk.

Place a conductive sheet such as a sheet of copper (with impedance lower than $10^6 \Omega$) on the work-desk and place the set on the conductive sheet so that the chassis.

2. Grounding for the test equipment and tools.

Test equipments and toolings should be grounded in order that their ground level is the same the ground of the power source.

3. Grounding for the human body.

Be sure to put on a wrist-strap for grounding whose other end is grounded.

Be particularly careful when the workers wear synthetic fiber clothes, or air is dry.

4. Select a soldering iron that permits no leakage and have the tip of the iron well-grounded.

5. Do not check the laser diode terminals with the probe of a circuit tester or oscilloscope.

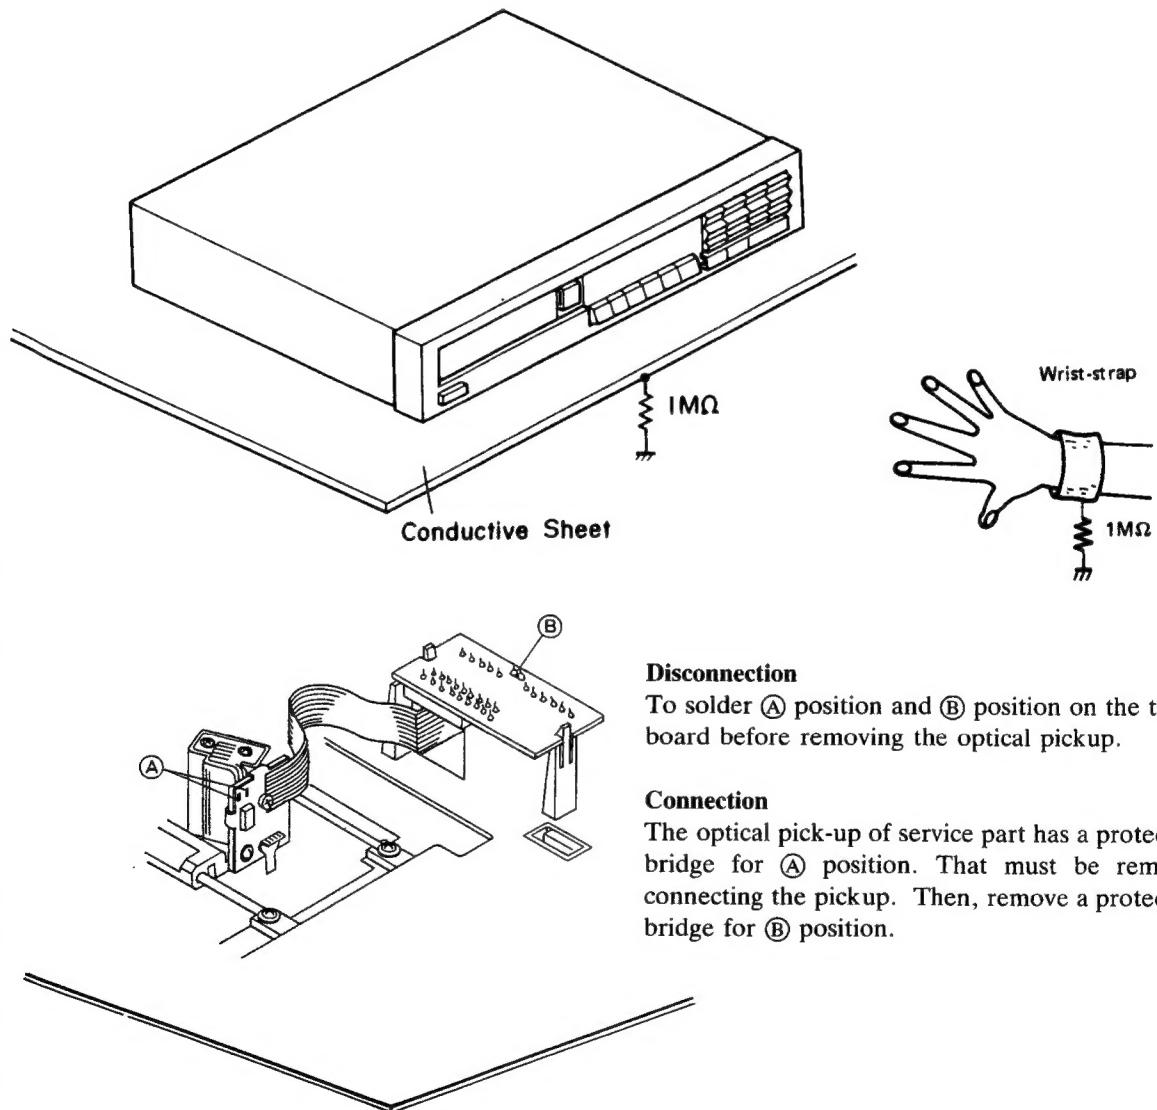

Fig. 11

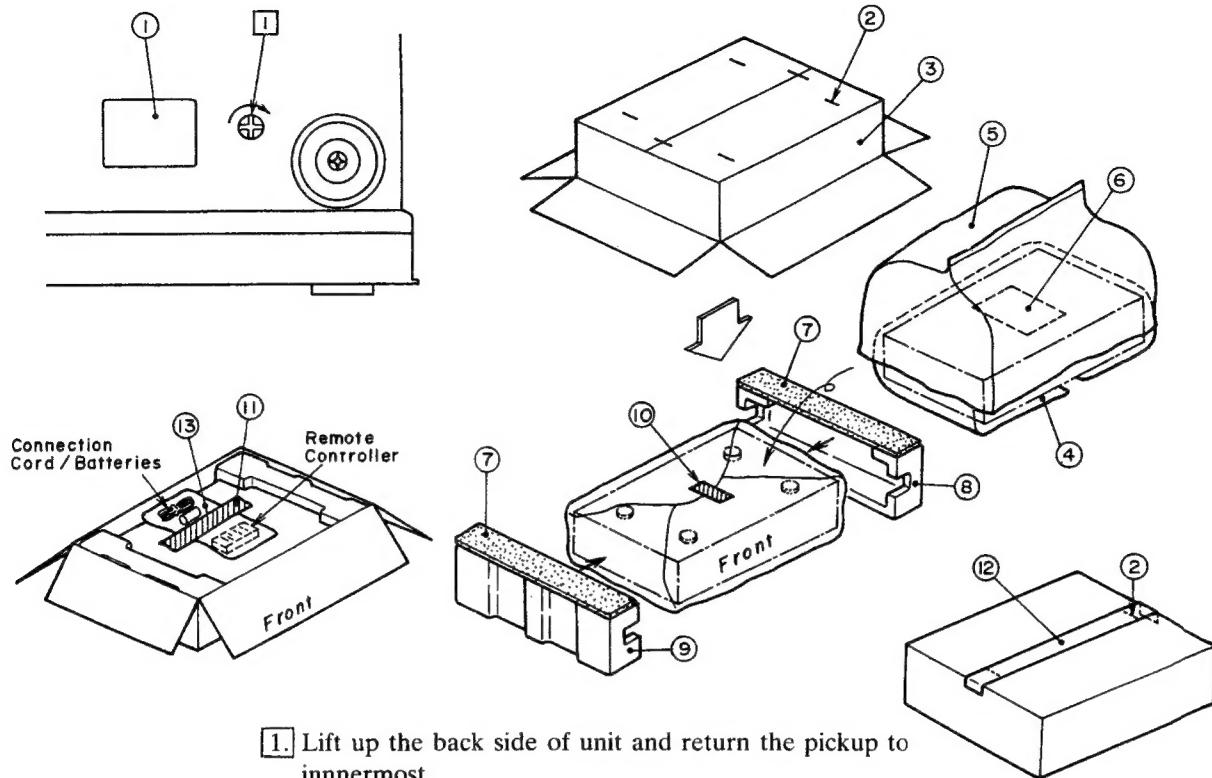

Disconnection

To solder **A** position and **B** position on the terminal PC board before removing the optical pickup.

Connection

The optical pick-up of service part has a protective solder bridge for **A** position. That must be removed after connecting the pickup. Then, remove a protective solder bridge for **B** position.

PACKING VIEW

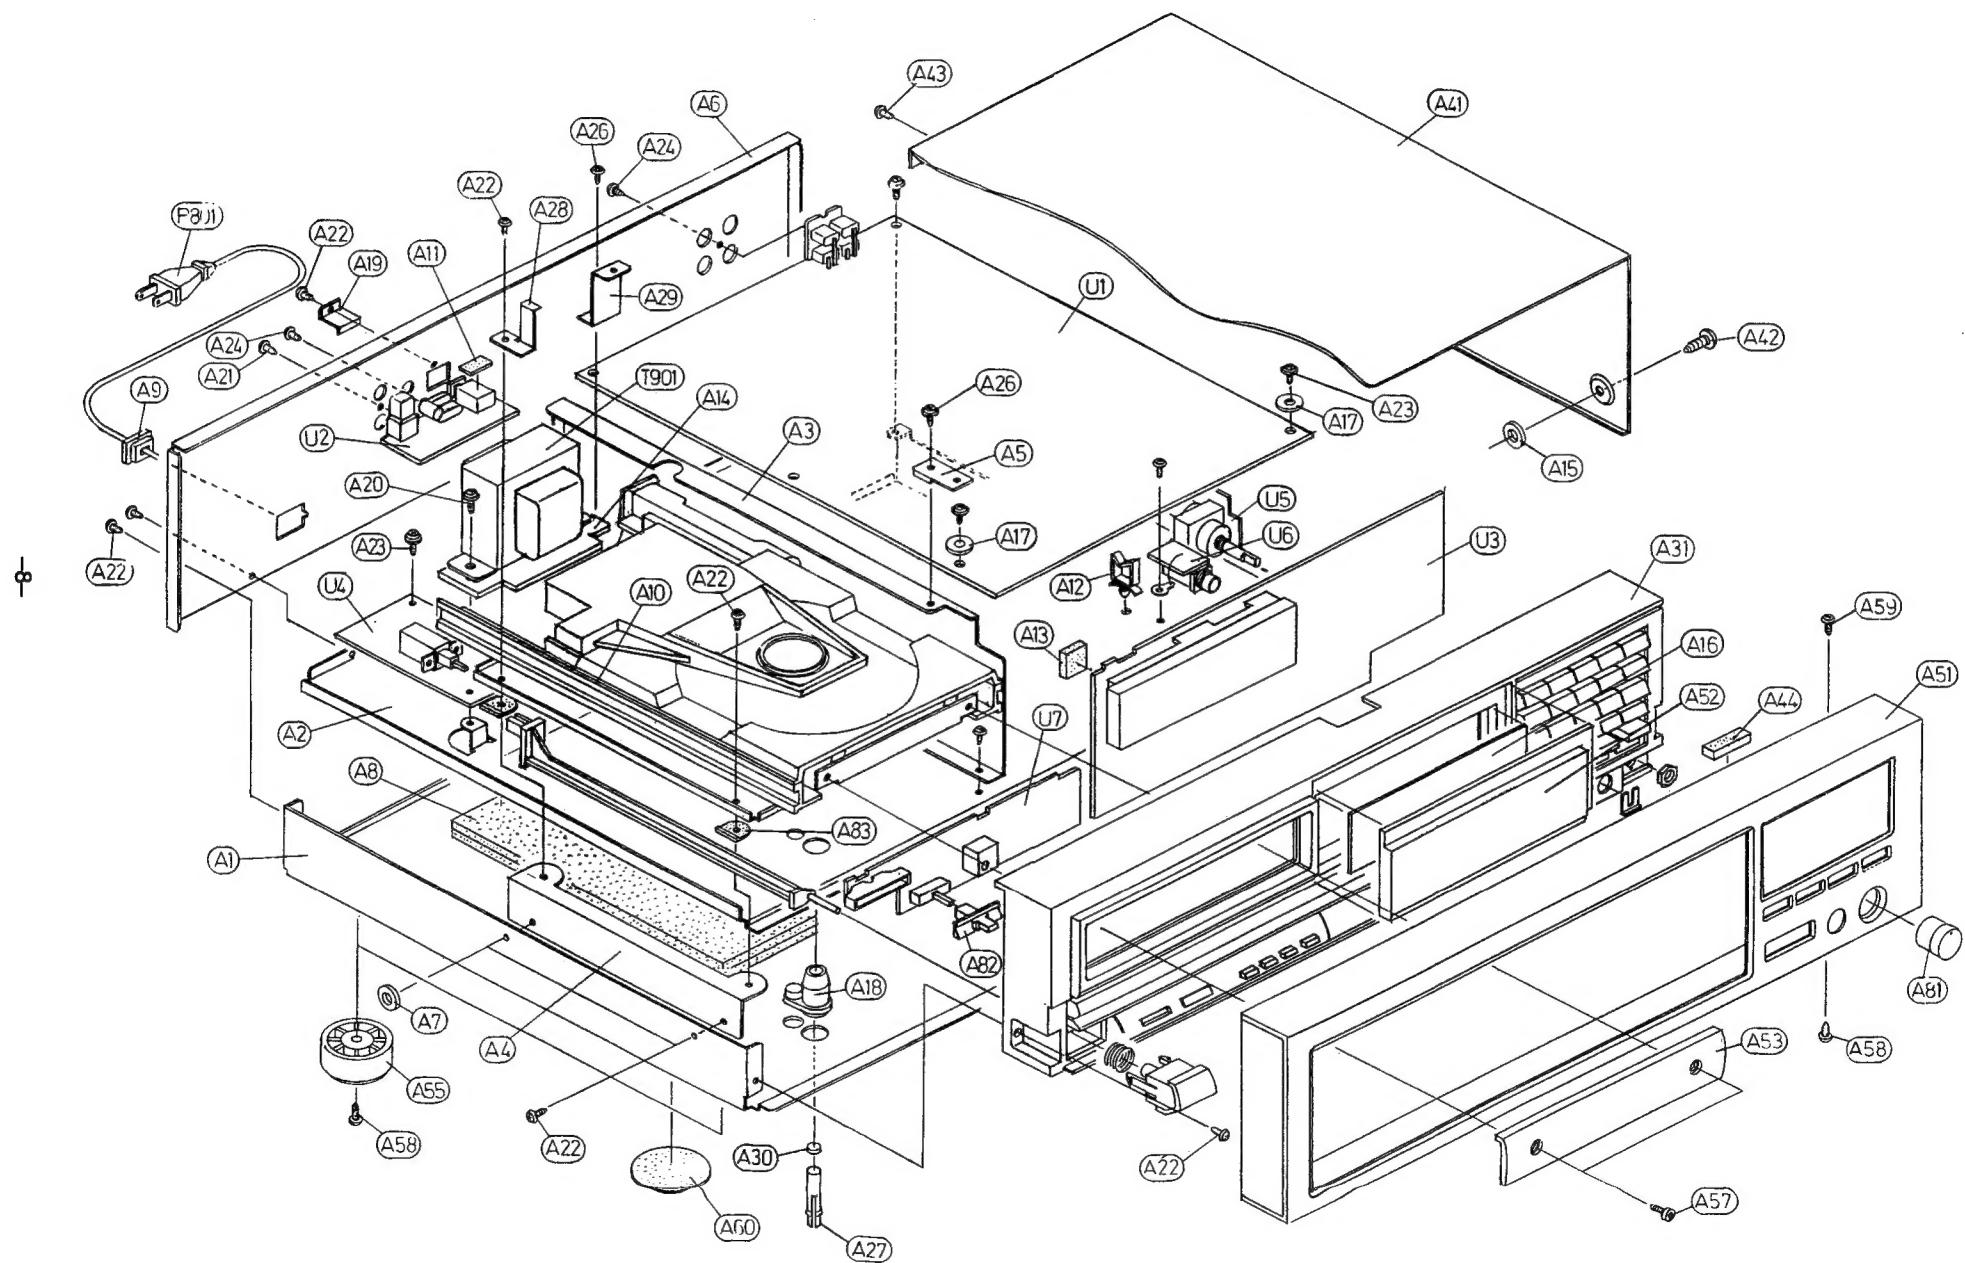

1. Lift up the back side of unit and return the pickup to innnermost.

Use a screwdriver to turn the lock lever (about 90°) in the round hole in the direction of arrow. (Clockwise)

DISASSEMBLING PROCEDURES

Top cover

Remove a screw holding the back panel and top cover.
Remove the four screws holding the top cover and chassis.

Main circuit PC board

Remove the top cover.

Remove the eight screws holding the back panel and chassis.

Remove a screw holding the bracket C and opto./digital output PC board.

Remove four screws holding the main PC board and chassis.

Tray panel

Use a hexagon wrench (2.5mm), remove the two hexagon bolt holding the tray panel and mechanical chassis.

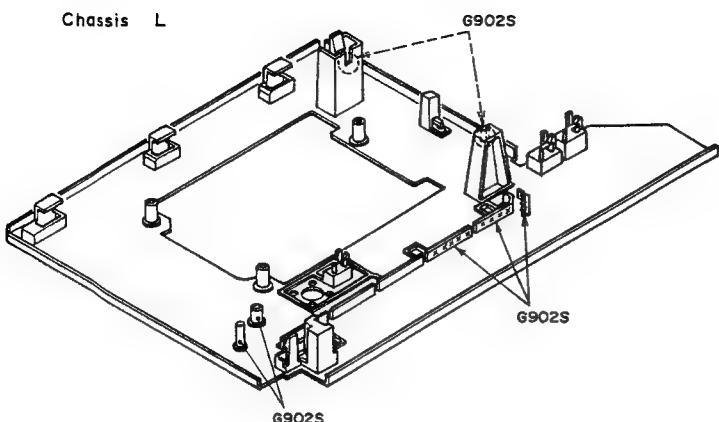

Mechanism ass'y

Remove the tray panel.

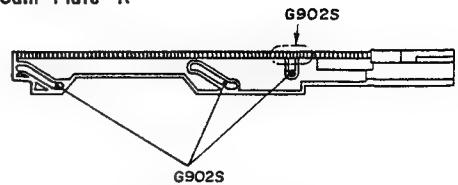

Remove the four screws holding the mechanism and chassis.

Caution: When disconnect the sockets P101 and P102 on the main circuit PC board, solder the B point on the terminal PC board or the A point on the pickup. (Refer page 6) After remove the flexible PC board of pickup from terminal PC board, remove the terminal PC board.

7	LOCK	GFS sampling terminal	59	PSSL	Code switching input of audio data output.
8	VCOO	VCO output terminal. 8.6436MHz when lock to EFM signal			Mode switching input of audio data output. Serial output at low level. Parallel output at high level
9	VCOI	VCO input terminal	60	APTR	Control output for aperture correction. High level when Rch.
10	TEST	0V	61	APTL	Control output for aperture correction. High level when Lch.
11	PDO	Phase comparator output terminal of EFM signal and VCO/2	62	DA01	DA01 (LSB of parallel sound output) output when PSSL = H. C1F1 output when PSSL = L
12	Vss	Ground	63	DA02	DA02 output when PSSL = H. C1F2 output when PSSL = L.
13	CLK	Serial data transmitter clock input terminal from microcomputer	64	DA03	DA03 output when PSSL = H. C2F1 output when PSSL = L.
14	XLT	Latch input terminal from microcomputer	65	DA04	DA04 output when PSSL = H. C2F2 output when PSSL = L.
15	DATA	Serial data input terminal from microcomputer	66	DA05	DA05 output when PSSL = H. C2FL output when PSSL = L.
16	XRST	System rest input terminal. Reset at low level.	67	DA06	DA06 output when PSSL = H. C2PO output when PSSL = L.
17	CNIN	Tracking pulse input terminal	68	DA07	DA07 output when PSSL = H. RFCK output when PSSL = L.
18	SENS	Inner condition output terminal correspond to address	69	DA08	DA08 output when PSSL = H. WFCK output when PSSL = L.
19	MUTG	Muting input terminal	70	DA09	DA09 output when PSSL = H. PLCK output when PSSL = L.
20	CRCF	CRC check output terminal of subcode Q	71	DA10	DA10 output when PSSL = H. UGFS output when PSSL = L.
21	EXCK	Clock input terminal for serial output of subcode	72	DA11	DA11 output when PSSL = H. GTOP output when PSSL = L.
22	SBSO	Serial output terminal of subcode	73	V _{DD}	Power supply (5V)
23	SUBQ	Subcode Q output terminal	74	DA12	DA12 output when PSSL = H. RAOV output when PSSL = L.
24	SCOR	Subcode sink S0 + S1 output terminal	75	DA13	DA13 output when PSSL = H. C4LR output when PSSL = L.
25	SQCK	Clock terminal to read the subcode Q	76	DA14	DA14 output when PSSL = H. C210 output when PSSL = L.
26	SQEX	Selector input terminal of SQCK	77	DA15	DA15 output when PSSL = H. C210 output when PSSL = L.
27	DOTX	Digital output terminal	78	DA16	DA16 (MSB of parallel sound output) output when PSSL = H. DATA output when PSSL = L
28	GFS	Indicator output of lock condition of frame sync	79	WDCK	Strobe signal output. 176.4kHz when DF is on. 88.2kHz when DF is off.
29	DB08 & DB05	Data terminals of external RAM	80	LRCK	Strobe signal output. 88.2kHz when DF is on. 44.1kHz when DF is off.
32					
33	V _{DD}	+5V			
34	DB04 & DB01	Data terminals of external RAM			
37					
38	RA01 & RA11	Address output terminals of external RAM			
48					

CXP5058H-104QZ (Microprocessor)

CKX5816SPS-15L/LC3517AS-15 (Static RAM)

Pin No.	Symbol	I/O	Wiring	Descriptions
1~12	g, c, e, d, p, h i, m, n, j, l, k	O		Fluorescent indicator tube segment output terminals. Active high.
13~28	16G~1G	O		Fluorescent indicator tube grid output terminals. Active high.
29	SCOR	I		Sub code sink input terminal. Leading pulse (75Hz) is input during play.
31	C4M	I		Reference clock input terminal. f=4.23MHz
32	RST	I/O		Reset input terminal. Reset at low level when the power switch turns on.
34	VDD		+5V	+5V power supply.
35~42	AD0~AD7	I		A/D converter input terminals for key input.
44	SC	O		Servo system serial command clock (CLK) and sub code Q read clock (SQCK) output terminal.
45	DATA	O		Data output terminal of serial command of servo system.
46	SUBQ	I		Input terminal of sub code Q.
47	SQCK	O		Read clock output control terminal of sub code Q.
48	CLK	O		Clock output control terminal of serial command of servo system.
49	XLT	O		Latch command output terminal of serial command of servo system.
50	PLAY	O		Play indicator output terminal. Not used.
51	OPEN	O		Tray open operation output terminal. Open at low level.
52	CLOSE	O		Tray close operation output terminal. Close at low level.
53	MUT	O		Audio muting control output terminal. Muting turns off at low level.
54	EMP	O		Emphasis switch control output terminal. Active high.
55	SENSE	I		This terminal is input the conditions of servo system according serial command of servo system.
56	FOK	I		Focus OK input terminal. This terminal is the high level when focus servo operates.
57	IN SW	I		Close switch input terminal. L when the close switch turns on.
58	OUT SW	I		Open switch input terminal. L when the open switch turns on.
59	LSR	O		Laser diode ON/OFF control output terminal. ON at low level.
60	NRSC OUT	O		System code output terminal.
62	NRSC IN	I		System code input terminal.
63	TIMER PLAY	I		Timer play switch input terminal. Time play at low level.
64	TIMER SHUFFLE	I		Timer shuffle switch input terminal. Timer shuffle at low level.
65~70	MODE 4, 5, 0, 1, 2, 3	I		Mode input terminals.
71	V _{ss}			Connect to GND.
76	VEDP			Power supply terminal for fluorescent indicator tube. (-30V)
77~80	o, a, b, f	O		Fluorescent indicator tube segment output terminals. Active high.

	MODE 0 SREC SELECTOR	MODE 1 PICKUP SELECTOR	MODE 2 NRSC SELECTOR	MODE 3 KICK SELECTOR	MODE 4 TRAY SELECTOR
HIGH (+5V)	1 sec wait	ALPS	ONLY (DCHG, OSTP)	Max 128 tracks	Speed down
LOW (GND)	0.5 sec wait	SONY	INVOLVES (SREC, ASPC)	Max 256 tracks	Speed const.

8D-3170-1 (DAC unit)

Analog positive power supply	V _{cc}	①	26	RVO	Rch hold output
Opto. drive reference voltage output	VRP	②	25	RDO	Rch deglitching output
Opto. drive voltage divided output	VRD	③	24	RDI	Rch deglitching input
DA converter power supply	DRO	④	23	RIO	Rch integrator output
Opto. drive opamp. negative input	DRI	⑤	22	RII	Rch integrator input
		⑥	21	AGND	Analog ground
Digital ground	DGND	⑦	20	VRO	DA converter reference voltage
Digital positive power supply	VL	⑧	19	LII	Lch integrator input
		⑨	18	L10	Lch integrator output
System clock input 16.9344MHz	MCLK	⑩	17	LDI	Lch deglitching input
DATA input	DATA	⑪	16	LDO	Lch deglitching output
Bit clock input 4.322MHz	BLCK	⑫	15	LVO	Lch hold output
Channel clock input 44.1kHz	LRCK	⑬	14	-V _{cc}	Analog negative voltage

ADJUSTMENT PROCEDURES

Instruments required

Dual trace oscilloscope, Frequency counter, AF oscillator, Test disc (SONY YEDS-18), AC voltmeter, Jitter meter, and Socket P4(Part no. 25050138)

1. VCO frequency adjustment

Connect the frequency counter to terminal P110.

Turn the power switch to ON.(No load the disc.)

Adjust R147 until the frequency counter reading becomes $4322 \pm 5\text{kHz}$.

After adjustment, disconnect the frequency counter.

2. Focus offset adjustment

Load the test disc YEDS-18 on the tray and play the track 2.

Connect the oscilloscope or jitter meter to terminal P109.

(Oscilloscope)

Adjust R110 until a clear trace of waveform pattern as shown photo 1 appear on the oscilloscope.

When the amount of jitter is broad, set R110 to mechanical center.

(Jitter meter)

Adjust R110 until the jitter meter reading becomes minimum.(Less than 10ns.)

After adjustment, disconnect the oscilloscope or jitter meter.

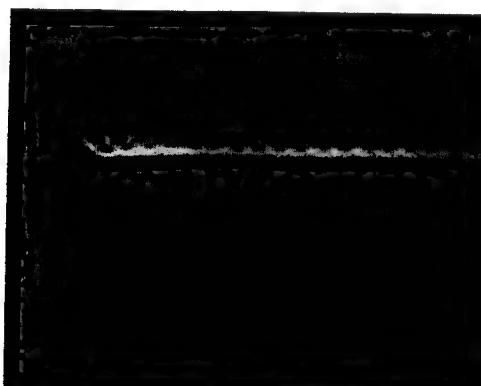

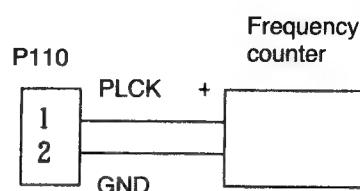

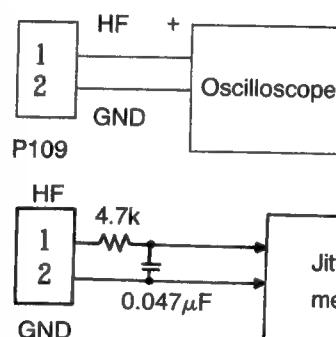

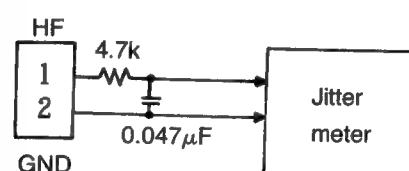

Photo 1

Oscilloscope range
Vertical : 0.5V/div.
Horizontal : 0.2 $\mu\text{s}/\text{div}$.
DC, Ground: Center

3. Tracking offset adjustment

Connect the short clip between TP105 and Ground of digital section.

Turn R125 to minimum position.(Counter clockwise)

Connect the oscilloscope between pin 3 (TR) of P108 and pin 2 (GND) of P109.

Adjust R108 until the center of tracking error signal on the oscilloscope becomes GND level.

Turn R125 to the mechanical center.

After adjustment, disconnect the oscilloscope and short clip.

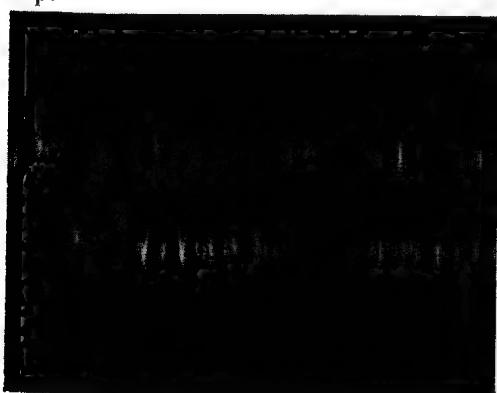

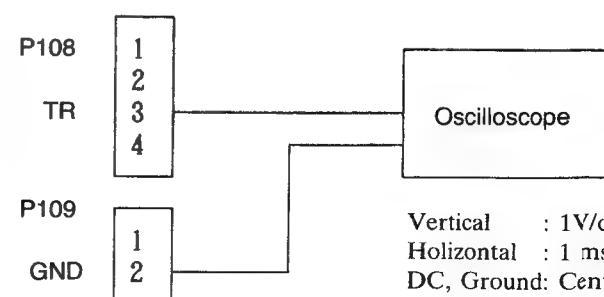

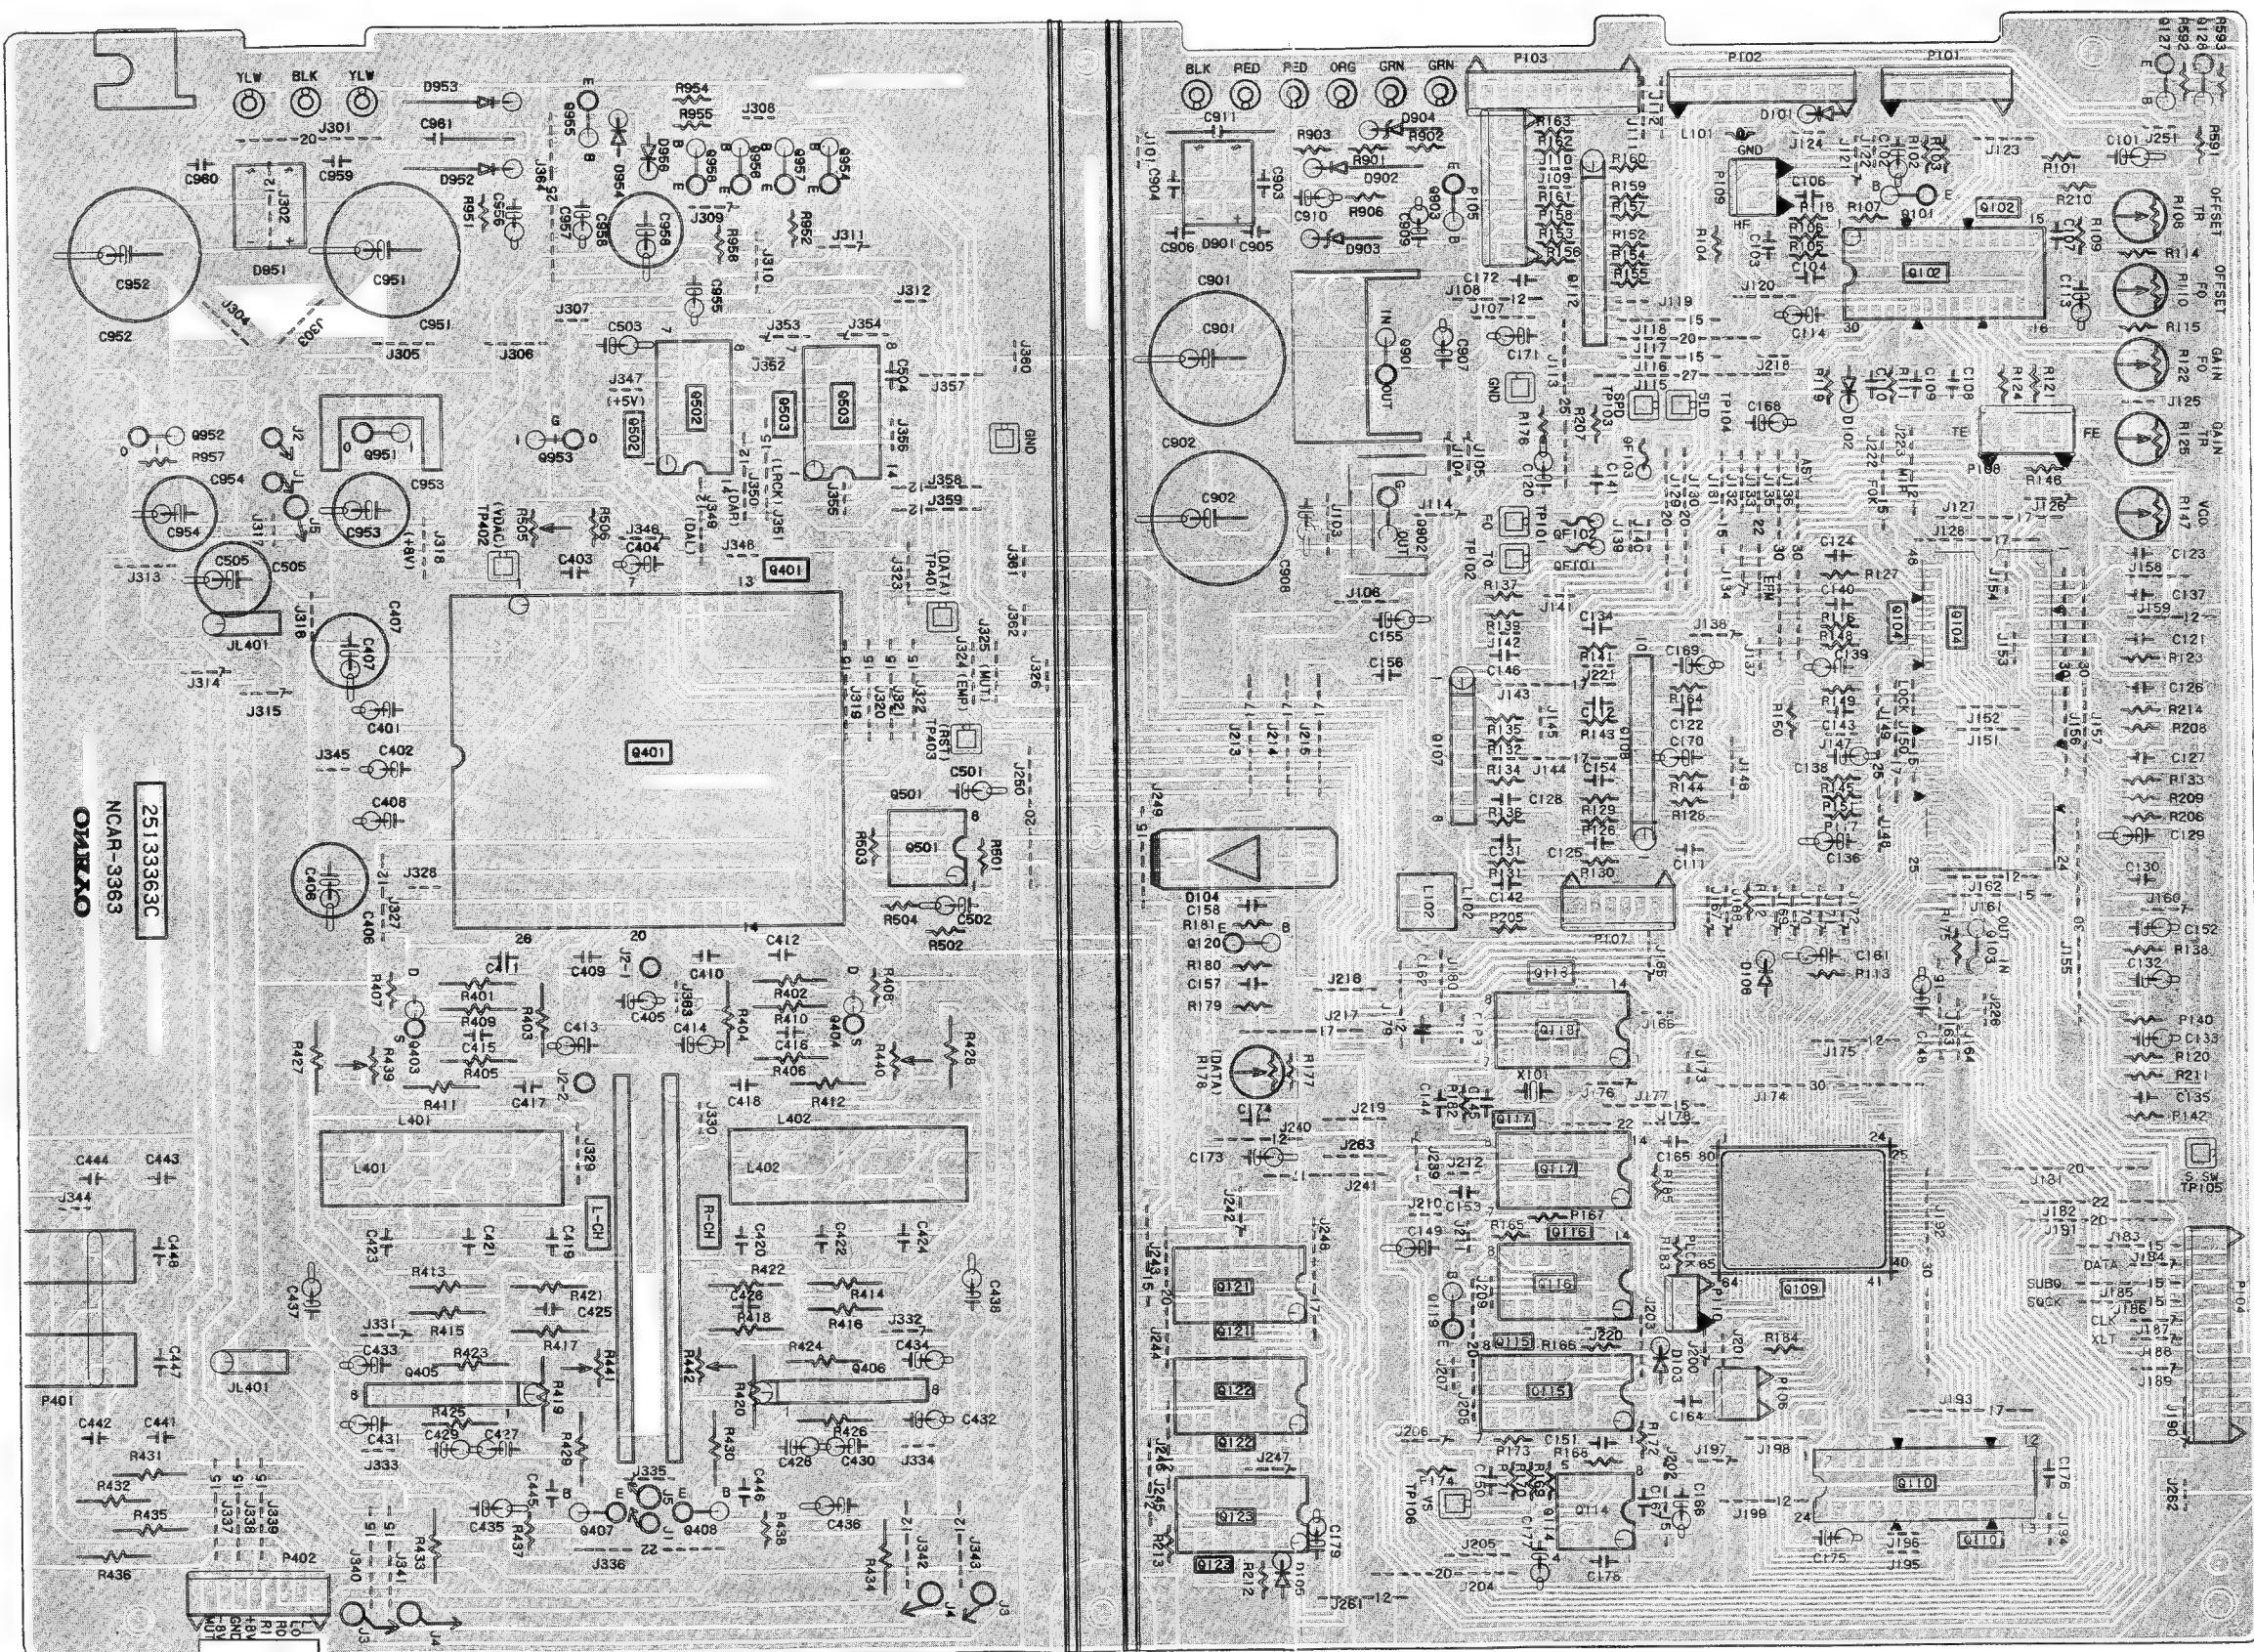

Photo 2

Vertical : 1V/div.
Horizontal : 1 ms/div.
DC, Ground: Center

Supl.

MODEL DX-6550

The signal processing IC used in the DX-6550 will change from the CXD-1125QZ to the CXD1125Q when the number of units produced passes that indicated below. The pin assignments of the above ICs are identical. However, as the CXD1125Q cannot be mounted as is because the pins are too short.

As a result, whereas the IC is mounted on the component side of the circuit board in the older models, in the new models it will be mounted on the soldered side. This necessitates certain changes in the main circuit board.

Number of units after which change takes place: 3814 p'cs. ~

CIRCUIT DESCRIPTION

1. Signals to the D/A converter

⟨Fig. 1⟩

Master clock (MCLK) and reset (RST) signals

The 16.9344MHz master clock signal is frequency divided by 3 in circuit block A shown by the box in Figure 1 to produce a 5.6448MHz clock signal which is output via Q401 #10. (See Photo 1.) This clock signal becomes the D/A converter's master clock signal. When power is turned on, a system reset signal (XRST) is input to C179. The one-shot pulse generation circuit indicated as block B in Figure 1 then outputs a downward pulse via Q121 #5. (See Photo 2.)

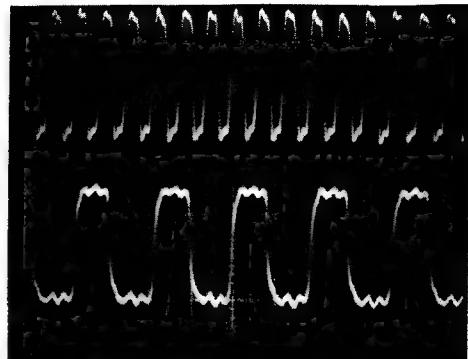

Photo 1

Upper part: System master clock (Q122 #3): 16.9344MHz
Lower part: D/A converter master clock (Q123 #8): 5.6448MHz
V:2V/div. H=0.1 μ s/div.

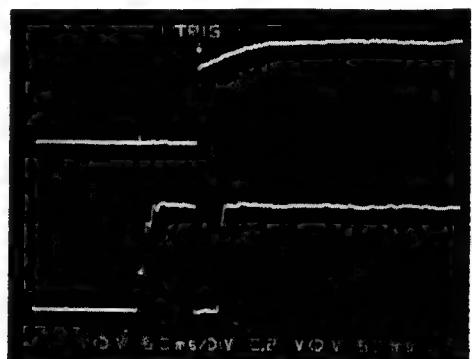

Photo 2

Upper part: XRST (Q109 #16)
Lower part: RST (Q121 #5)
V:2V/div. H=50 ms/div.

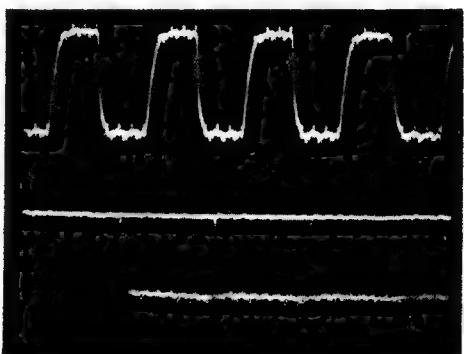

Photo 3

Upper part: Bit clock (BCLK) (Q502 #1)
Lower part: Data signal (DATA) (Q503 #12)
V:2V/div. H=0.2 μ s/div.

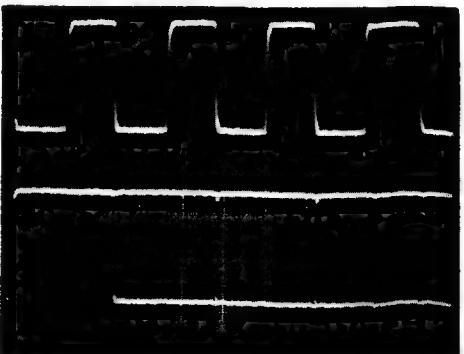

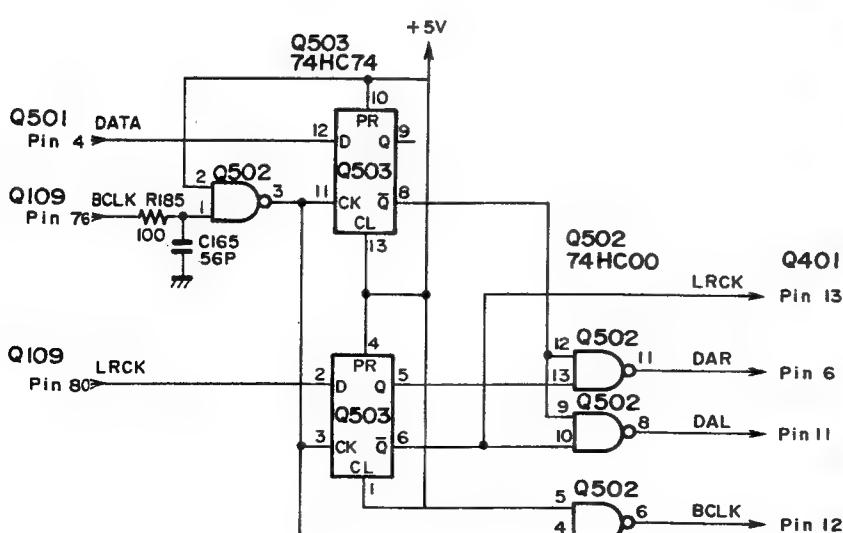

Photo 4

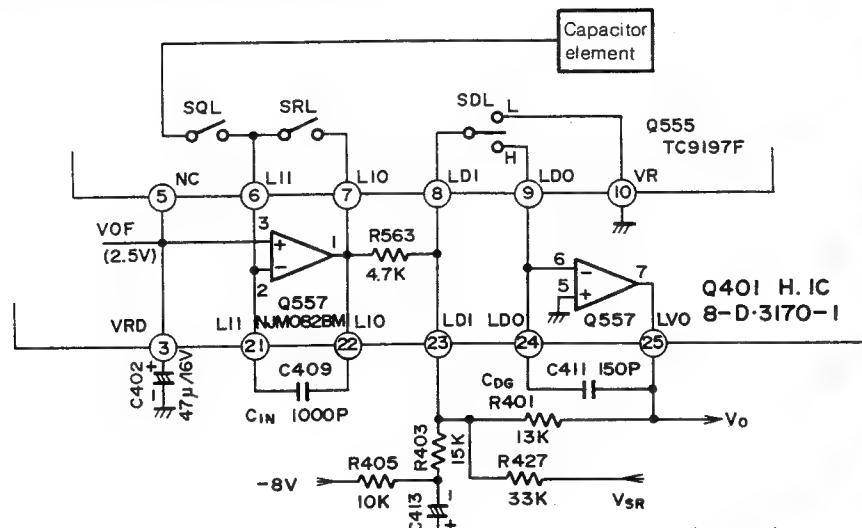

Upper part: Bit clock (BCLK) (Q502 #3)
Lower part: Data signal (DATA) (Q503 #8)
V:2V/div. H=0.2 μ s/div.

⟨Fig. 2⟩

L/R data signals (DAL, DAR), bit clock (BCLK) and channel clock (LRCK)

The data signal reproduced from the optical transfer circuit is later than the original data signal (Q109 #78). (See Photo 3.) In order to phase align it with the bit clock signal, a data signal synchronized with the bit clock signal is obtained from Q503 #8 as illustrated in Figure 2. (See Photo 4.) Also, the channel clock is obtained from Q401 #13 after synchronization with the bit clock. The data signal is divided into separate left and right channel data signals under the control of this channel clock signal. (See Photo 5.)

(Fig. 3)

D/A converter circuit board operation

Step	SQL	SRL	SDL	Operation description
1	ON	ON	L	Reset action: CIN, CDG are discharged.
2	ON	OFF	L	Integral control action: CIN is charged.
3	OFF	OFF	L	Hold action: CIN charge is held.
4	OFF	OFF	H	Deglitching action: Charge built up in CIN is transferred to CDG.

The D/A converter integrator output Q401 #22 swings the 2.5V D/A converter standard voltage toward the ground as the maximum level. Therefore, the 2.5V DC offset becomes a weighted waveform. (See Photo 6.) A current (fixed bias current from R403 and R405 and R427 super servo output current) equivalent to this offset voltage is input to the deglitcher amplifier, canceling it. As a result, an output free of offset voltage is obtained from the deglitcher amplifier output Q401 #25. (See Photo 6.) For reference, see the integrator output time axis expansion (f=10kHz, 0dB) and the waveform when there is no input signal (STOP). (See Photo 7.)

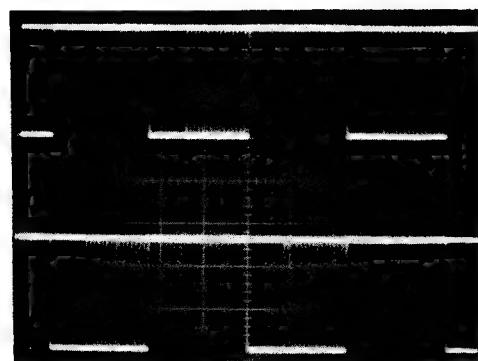

Photo 5
Upper part: L channel data signal (Q502 #8)
Lower part: R channel data signal (Q502 #11)
V:2V/div. H=5 μ s/div.
Note: Synchronize signal of oscilloscope: LRCK

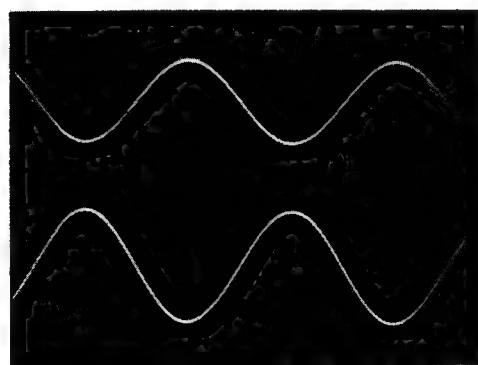

Photo 6
Upper part: Integrator output
Lower part: Deglitching output
V:1V/div. H=0.2 μ s/div.
Note: Play the track 2 of test disc VEDS-18.

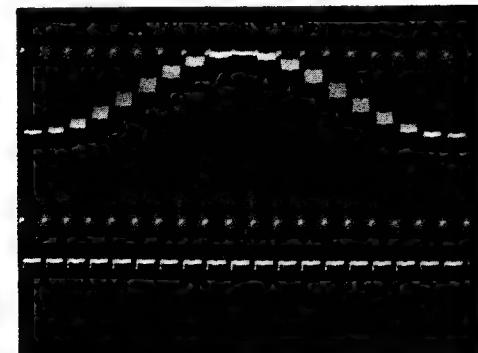

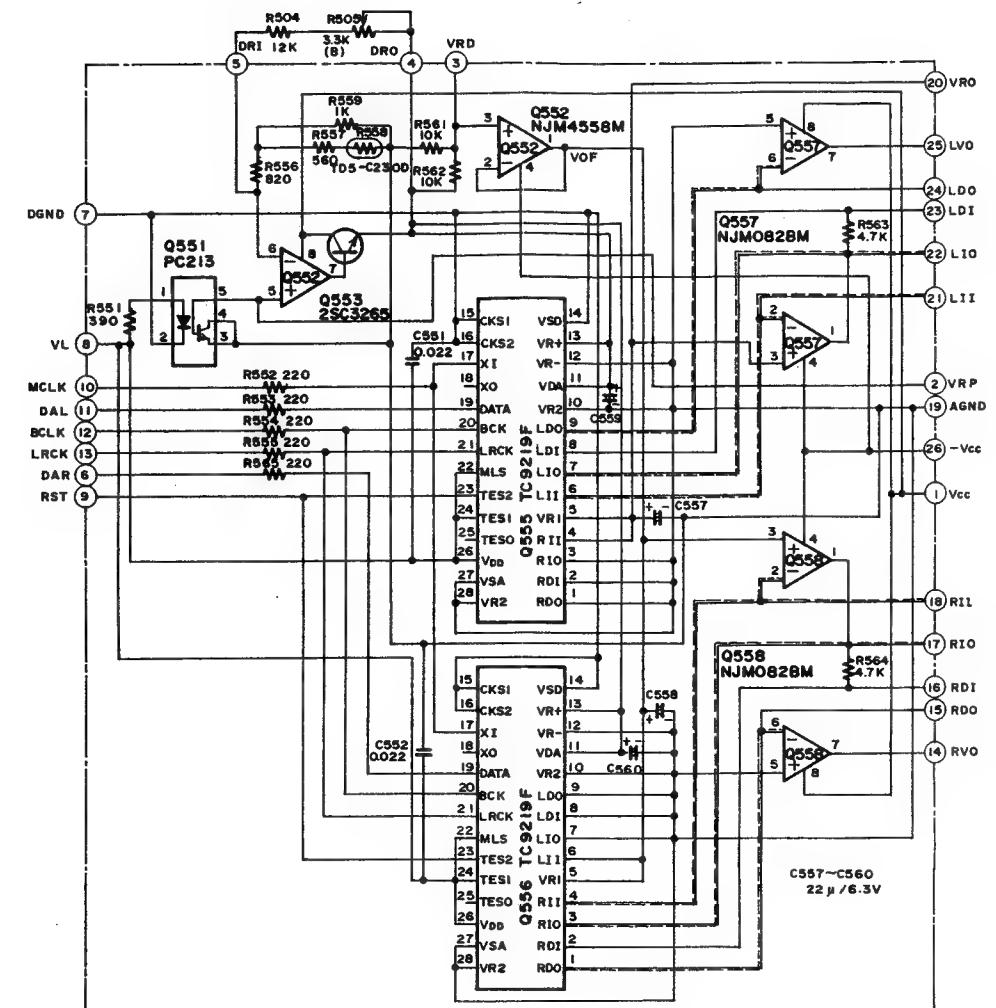

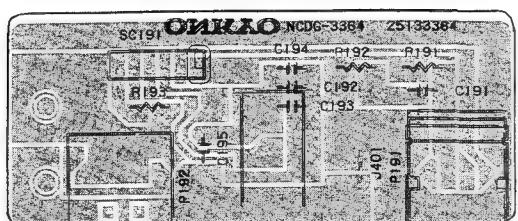

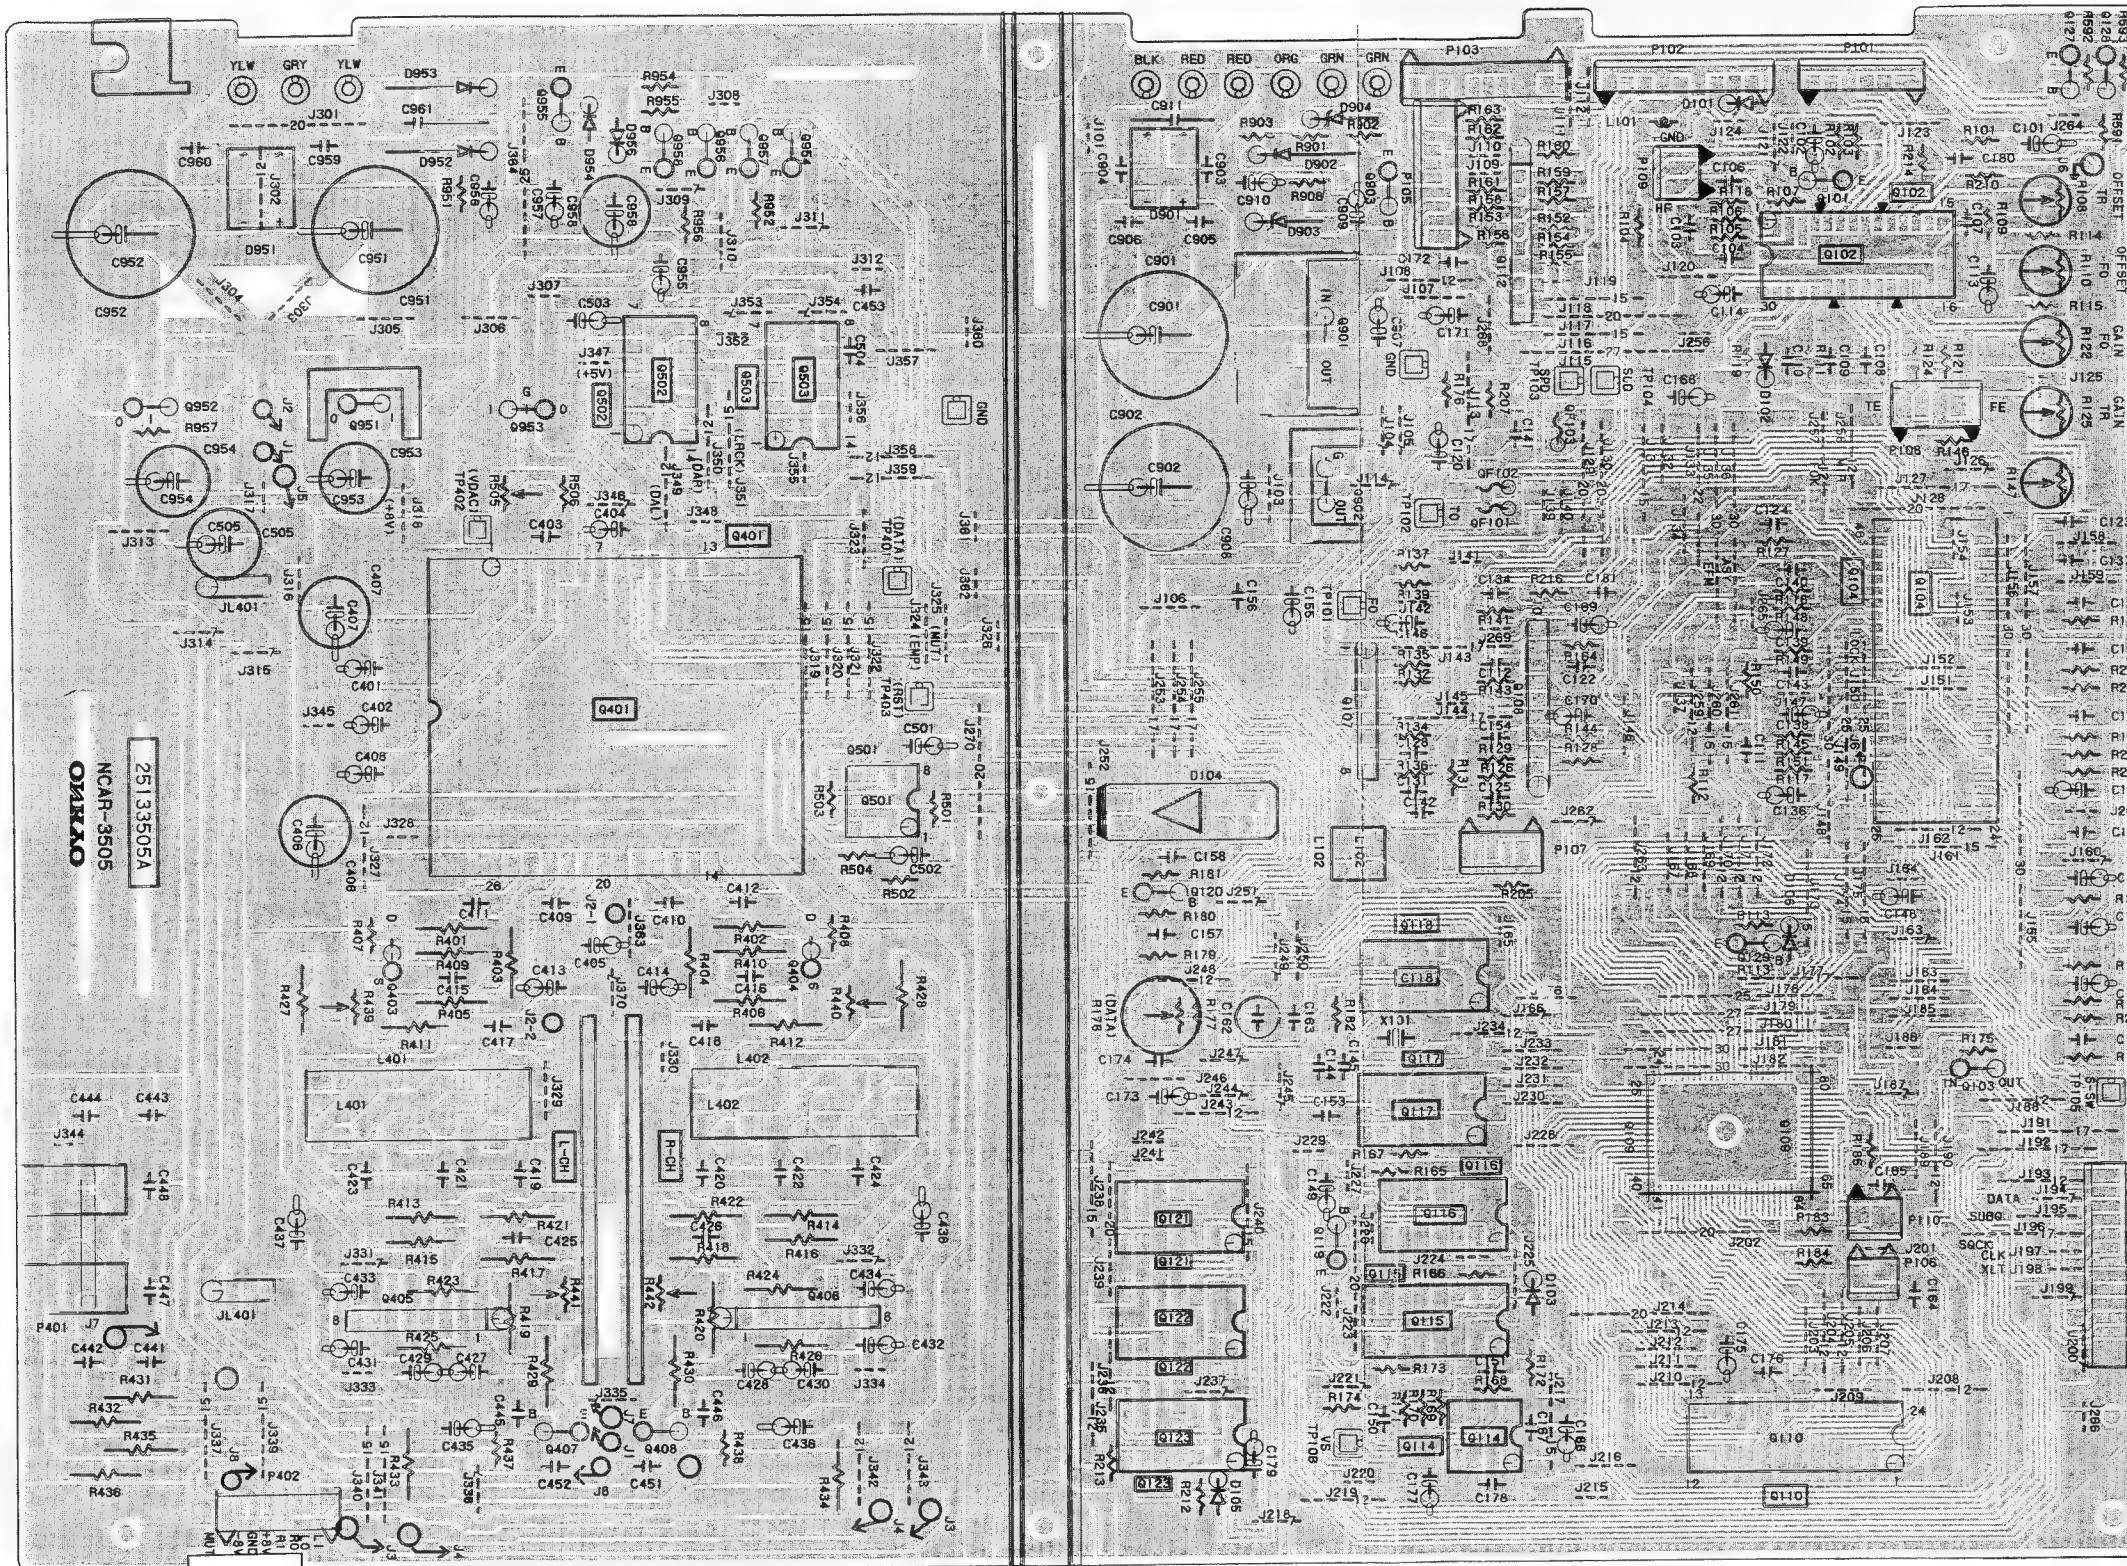

Photo 7
Upper part: Playback mode
Lower part: Stop mode
V:1V/div. H=10 μ s/div.
Note: Play the track 5 of test disc YEDS-18.
